8. Describe in 5-7 sentences total:

We chose to examine the 2025 water year. This water year is relevant to our study because the dataset that we are examining (veg) covers years from 2021-2025, so we are looking at recent photos to see what the grassland habitat has transformed into and how that compares to our data. We are also looking at how our visualizations might vary over season (October vs. April). We chose to examine two photo points at spot 22. The first pictures point west and the second set points northeast facing the slough. This photo point is relevant to our study because we want to examine grasslands at a time when a major prescribed fire occurred, as well as a wet water year. We see significant changes in vegetation abundance in April compared to October for both directions. There is higher abundance in April as well as it being greener. This could point to higher numbers of both native and non-native species presence. The northeast photos also show changes in water elevation for the slough, as it is higher in April than in October.

Reports or posters

Individually:

1. Navigate to a. the Posters section or b. the Reports section of the collection.
2. Find the poster(s) or report(s) related to your project.

As a group:

3. Discuss which poster or report to focus on based on its relevance to your study question or context. **Note that you only need one of either type.**
4. Read the poster or report.
5. Discuss the key insights.
6. Provide the information in the space below. For “Key insights” and “Relevance to your study”, respond in 3-5 sentences.

Report or poster information

Title:

Authors:

Year published:

Permalink:

Dataset used (likely):

Key insights:

Relevance to your study (be specific here with the question you have asked, the figures you've made, the insights you've gained, etc.):

Annotated bibliography

Background

You can find peer-reviewed articles by searching on Google Scholar, which is a large database of research papers, posters, and other materials.

Note: while it may be tempting to use AI to provide a list of papers for you, you should *not* be using AI for any component of this activity. You'll accomplish the objective of articulating the connection between your study and other study systems/questions by completing the difficult task of sifting through papers that may not be relevant to you before finding one that is.

Additionally, you can test out inserting citations in Quarto. See [this resource to insert a citation in a .qmd](#).

Directions

Individually:

1. Search Google Scholar for papers that might be relevant to your study. One recommendation for how to start: search for whatever your focal variables may be + "wetland restoration" (for example, "bird abundance wetland restoration", "water salinity wetland restoration", "aquatic invertebrate wetland restoration").
2. Find 4-5 papers that might be relevant based on title and what shows up in the search.
3. Read the abstracts of those 4-5 papers.

4. Decide which - if any - are actually relevant to your project. Make a note of these papers. Note that a paper may be relevant in that it shares a) taxonomic groups, b) geographic regions, c) research questions, d) research methodology - there are lots of ways that existing research can be tied into your project.
5. If step 4 did not yield any relevant papers, repeat steps 2-4.
6. Search for papers until you have 4 relevant papers per person (12 total for a 3 person group).

As a group:

7. Share the papers you found, discussing the main points of the paper and how they are relevant to your project.
8. Fill in the template for an annotated bibliography below.
9. In the “Main findings” or “Relevance to study” sections, insert a citation for the paper.

Paper 1
